

### **Fathammer Games to Sonera's SurfPort**

(September 20, 2005) - Fathammer and mobile operator TeliaSonera Oyj have agreed to bring globally successful Fathammer 3D mobile games to Sonera's SurfPort mobile portal. The first six games, released in September, will be available to consumers through eDome gaming service of SurfPort. Sonera and Fathammer will also share in extensive co-marketing of the new games.

Sonera is the first European mobile operator to offer advanced 3D mobile games directly to its customer's mobile phones. Fathammer games are developed and powered by the company's own X-Forge® 3D game development system, which supports advanced features such as fully 3D graphics, physics simulation and responsive controls.

For Fathammer, the cooperation with Sonera means a stronger position in Europe. The company's main market has until now been in US and Asia, particularly in Korea, where Fathammer games are available through mobile content portals of major operators SKT and KTF.
