

McAfee, Inc. and Bitfone collaborate on Over-the-Air Mobile Security Protection

February 14, 2005

McAfee and Bitfone to Demonstrate Technology that Protects Operators, Enterprises and Consumers from Future Mobile Threats at 3GSM World Congress

3GSM WORLD CONGRESS, CANNES, FRANCE, February 14, 2005 - McAfee Inc. (NYSE: MFE), the pioneer and worldwide leader of intrusion prevention solutions, and Bitfone Corporation, the company that pioneered firmware over-the-air (FOTA) update technology for mobile phones, today announced that they are demonstrating a new active threat management system for mobile phones at the 3GSM World Congress in Cannes, France. The demonstration is a result of technology collaboration between Bitfone and McAfee, and will show how mobile operators can detect, recover from and prevent security threats to mobile phone software from viruses, worms, auto-dialers, spyware and other malicious threats.

By expanding its portfolio of over-the-air device management solutions to address mobile security, Bitfone offers mobile operators a comprehensive, customer care-oriented, active threat management solution that incorporates:

- remote diagnostics to identify suspicious files or programs on the device
- ability to invoke virus scanning on a device
- automated updates to virus definition files on a device
- bulk distribution of security updates to all vulnerable devices
- the ability to remotely reset a compromised device using OTA firmware or filesystem updates

The demonstration with Bitfone furthers McAfee's commitment to develop solutions and products to protect both consumer and enterprise users from potential malicious applications and viral threats brought on by the growth of wireless and mobile communication platforms. This year McAfee expanded its offerings and established itself as the clear market and thought leader in mobile security with the world's first end-to-end solution with security integrated from the handset back through the operator's wireless network and support infrastructure.

"It's only a matter of time until security threats on handsets advance from experimental hacking, like Cabir and Skulls, to serious damages from unauthorized dialing, text messaging, web downloads, corporate data access, and other security breaches that impact subscriber billing and privacy rights," said Gene Wang, CEO of Bitfone Corporation. "Mobile security is a natural extension to our over-the-air device management portfolio, and by collaborating with McAfee we can leverage automated customer care to make threat management seamless for operators as well as the subscribers and enterprises they serve."

"There is no doubt that mobile security will become a real issue with monetary consequences for operators, enterprises and consumers alike," said Victor Kouznetsov, Senior Vice President of Mobile Solutions for McAfee. "We look forward to working with Bitfone so that operators can keep their customers safe from unwanted programs by providing comprehensive security within their network of devices."

To see the new security demonstration or obtain more information on McAfee's Mobile Solutions, please visit the McAfee Café at the 3GSM World Congress in Cannes, France, February 14 - 17, located at Boulevard de la Croisette (opposite the junction with rue des Serbes).
