

Ekahau Asset Tracking Improves Quality of Care in The Belfast Health and Social Care Trust

Ekahau RTLS tracks valuable medical equipment in Cardiology and Radiology departments

Helsinki, Finland — September 27, 2007 — Ekahau, Inc. a leading provider of Wi-Fi based Real Time Location Systems (RTLS) today announced that Royal Victoria site in The Belfast Health and Social Care Trust in Northern Ireland has selected Ekahau to keep track of vital equipment.

"After evaluating a number of location solutions, Ekahau RTLS, with its use of our existing Wi-Fi network, accuracy and extensive features, convinced us to put the installation in motion. We believe it will quickly prove itself by helping the Cardiology and Radiology departments reduce the cost of monitoring inventory that is required for urgent patient care. It also helps us improve the availability of these devices enhancing the services provided to our patients. " said Paul Duffy, IT manager at the Royal Hospitals.

Following a comprehensive Wi-Fi site survey, Ekahau's RTLS will use the hospital's existing Trapeze Networks wireless infrastructure, which is currently being used for mobile data connectivity and voice applications. Within each floor of the Phase 1 building at The Royal Victoria Hospital, Ekahau RTLS will track such assets as defibrillators, infusion pumps, syringe pumps, balloon pumps, ultrasound scanners and patient monitors, which are both expensive and mission critical medical tools in the Cardiology and Radiology departments.

Ekahau has currently installed its Ekahau Positioning Engine version 4.0, along with the Ekahau suite of applications, namely Ekahau Tracker and Ekahau Finder. Ekahau has also provided T201 and T301 Tags for attachment to target equipment.

The aim is to present the tagged equipment's location graphically with potential use in conjunction with the clinical staff's requirements, lab's call-logging, service report and inventory databases to improve response times. Added value to the project is provided by the ability to import text into the database related to the location of material. This ensures quick follow up on both availability of resources, their location, status and need for maintenance.

Ekahau RTLS solution enables such award winning features as the ability to locate equipment with a room accuracy, to present last known location, the logging of specific area movements such as exit and entry to the tracked building and the ability to send commands to the T201 and T301 Tag – Led / Buzzers.

About Ekahau RTLS

The Ekahau RTLS platform is a comprehensive solution that includes server software, application software and tags. Ekahau RTLS can locate Wi-Fi enabled devices and any other items to which an Ekahau tag has been attached.

About The Belfast Health and Social Care Trust

The Belfast Health and Social Care Trust was formed in April 2007 with the merging of the 6 existing healthcare trusts in Belfast - Belfast City Hospital, The Royal Hospitals, Mater Hospital, South and East Belfast, North and West Belfast and Greenpark Healthcare Trust. The Royal Hospitals is Northern Ireland's biggest and best known hospitals complex. Made up of four linked hospitals - the Royal Victoria, Royal Jubilee Maternity Service, Royal Belfast Hospital for Sick Children and the Dental Hospital - "the Royal" treats more than half a million people every year and has a worldwide reputation for excellence.

About Ekahau Inc.

Ekahau Inc. is the industry leader in providing Wi-Fi based RTLS solutions. Ekahau's customers, including several Fortune 500 companies worldwide, are realizing the benefits of Wi-Fi based location services and innovative Wi-Fi network planning and optimization tools. Ekahau partners

include wireless software developers, leading system integrators, and international OEM partners, who develop and market wireless enterprise applications. Ekahau is a U.S.-based corporation, with offices in Saratoga, CA; Reston, VA; Helsinki, Finland; and Hong Kong, China. For more information about Ekahau, please visit <http://www.ekahau.com>.
