

Ekahau Delivers Visitor Tracking Solution for Dubai Theme Park

Ekahau RTLS with wireless tags to ensure safer entertainment experience for theme park visitors

Helsinki, Finland — October 18, 2007 — Ekahau Inc., a leading provider of Wi-Fi based Real Time Location Systems (RTLS), today announced that the Stargate, a new multi-use family entertainment center in Dubai, United Arab Emirates, will integrate Ekahau Positioning Engine 4.0 (EPE) with its Cisco wireless Wi-Fi network to provide a comprehensive tracking system for visitors, staff and portable equipment. One unique application being offered enables families visiting the theme park to receive a compact Ekahau T301A tag for each child, enabling parents and Stargate staff to locate them in real time, should they get lost.

"As the first installation in the Middle East for any tracking system based on Wi-Fi networks, we are particularly proud to work with such a high profile customer as Stargate," said Assem Lawandy, managing director of Wireless Vision, the company responsible for installing the Ekahau solution. "System integration with the Cisco network installed by Emirates Computers, a Dubai-based Cisco Gold partner, is proceeding well and with everything in place, we will have something truly unique to offer our customer."

In addition to the 1,100 Ekahau T301A tags provided for use primarily with young visitors, the theme park also plans to use Ekahau's forthcoming credit card-sized T301B tags for security personnel. Tags will also play an important role in locating valuable mobile equipment over the 24,000 square meter venue.

"Stargate is a prestigious and important project for Emirates Computers," Haytham Kamel, general manager – Dubai, Emirates Computers. "The smooth coordination between the Cisco wireless network solution provided and Ekahau's RTLS system offers our customer a unique, cost-effective and extremely advantageous tracking system that will add to the enjoyment and safety of their visitors."

The topography of the theme park is not without its challenges. It is spread across five domes, each offering a unique experience including 3-D shows, a rollercoaster and a real-snow, lunar-themed play area. Other facilities include a multi-cuisine food court beneath a glazed pyramid structure and various exhibition and retail sites.

"After long evaluation, we decided that the integration of the Ekahau system with our Cisco network offered the best possible synergy," said Maher Hakim, concept creator and executive director of Osus, the real estate company developing and running the park. "We believe the benefits of this system are clear - allowing our younger visitors the freedom to explore the centre, and their parents peace of mind to know where they are at any given time. The ability to track our staff and valuable equipment also is a strategic benefit over such a complex campus area."

About Emirates Computers

Established in 1978, Emirates Computers is a UAE-based technology company that scopes, plans, designs, implements, and services the various layers of technology required to enable clients to experience "Smart Living". As a partner of choice for leading technology providers such as Cisco, Nokia, Oracle, Microsoft, Dell, EMC, Sun Microsystems, Vignette, Tandberg, Citrix, NCR, SGI, Roland and others, Emirates Computers covers markets end-to-end, catering to both enterprises and consumers.
